The second ring road is put into use in the midst of next year

Approximately 500 workers and more than 200 lorries and technology are used for construction works

The Second Baku Ring Road is under construction. At the moment, the soil is being pressed in the sections of “Kurt Gate” and “Lokbatan Ring”. The objective is to prevent landslides. The construction of roadside retaining walls is also planned.

The Ministry of Transportation stated that 2 road covers, pedestrian crossings and vehicle crossings had been constructed on the road. Drainage works were performed on the land for the purpose of draining soil and storm waters and ensuring the road safety. In addition the communication lines are replaced. Asphaltting works were completed at one section of the 6-lane road.

Approximately 500 workers and more than 200 lorries and technology were used for construction works carried out jointly by Azerinsaatservis LLC. and the Turkish company Mak-Yol Construction, Industry, Tourism and Trade in line with the order of the Ministry of Transportation. The construction works shall be fully completed in the midst of 2010.

Started in the midst of 2007, Baku Ring Road–2 Project comprises of Bileceri Downgrade, Tiflis Street, Kurt Gate and Lökbatan Ring. It should be noted that approximately 7 kilometers of the road having a length of 21,5 km fall within the land of Junction No: 2.

In general, the road in question has an international importance. In other words, it is the ring linking Baku-Russian Federation country border motorway and Baku-Gazah-Georgia country border motorway.
